Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Inventorship

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,2 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Oda et al (US 6,786,199).

As to Claim 1, Oda et al discloses a method for the controlled switching off of a spark ignition internal combustion engine having at least one combustion chamber 11 formed by a cylinder and a piston 13, and having an associated combustion air intake system having at least one of a throttle valve 3 and a variable gas metering system, the engine being coupled to an engine controller 4, said method comprising: opening the throttle valve 3 at least once during the switching off operation of the engine.

As to Claim 2, Oda et al discloses closing the throttle valve at least once during the switching off operation of the internal combustion engine.

As to Claim 8, Oda et al discloses an engine system for the controlled switching off of a spark ignition internal combustion engine having at least one combustion chamber 11 formed by a cylinder and a piston 13, said system comprising: an air intake system having a throttle valve 3; and an engine controller 4 electronically coupled to the engine and said throttle valve, said controller causing said throttle valve to open at least once during the switching off operation of the engine.

Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Ejiri et al (US 4,735,179).

As to Claims 1 and 8, Ejiri et al discloses a method for the controlled switching off of a spark ignition internal combustion engine having at least one combustion chamber formed by a cylinder and a piston, and having an associated combustion air intake system having at least one of a throttle valve 1 and a variable gas metering system, the

Art Unit: 3747

engine being coupled to an engine controller 6, said method comprising: opening the throttle valve 1 at least once during the switching off operation of the engine.

Allowable Subject Matter

Claims 3-7 and 9-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
